

#### THE COMPANY

Founded 2003, Signalion is a provider of 3GPP-LTE test solutions for wireless infrastructure manufacturers and operators. In 2009 Signalion was awarded the "FutureSAX" growth award to acknowledge the significant growth achieved in the past few years.  
(visit: [www.signalion.com](http://www.signalion.com) for more details)

#### THE PRODUCTS

Signalion's products support wireless infrastructure development, interoperability testing, field trials, and production testing.

- Sorbas 3GPP-LTE Test-UE Platform
- HaLo Platform for RF-Monitoring and Wireless System Prototyping

#### SIGNALION'S CUSTOMERS

Among Signalion's customers are research & development departments and institutions, wireless infrastructure manufacturers, and wireless operators. Signalion also partners with established wireless test solution providers to offer enhanced infrastructure test capabilities to its customers.

#### 3GPP-LTE ACTIVITIES

Signalion is an active member of the LTE/SAE Trial Initiative (LSTI) and supports the Initiative's field trials with LTE-test User Equipment and Mobile Prototypes. Furthermore Signalion provides hardware platforms for EASY-C, one of Europe's biggest research projects led by T-Mobile and Vodafone to evaluate the future of wireless broadband technology beyond WiMAX and LTE.
