Press Release

Signalion enhances LTE-eNB Test Tool with protocol test suite for higher layer testing

Dresden, Germany

Signalion GmbH today announced the official release of a Layer 3 protocol option for the Sorbas LTE Test-UE at the LTE World Summit in Berlin. With this additional functionality Signalion now offers test solutions for all eNB protocol layers. Customers may choose from a large collection of protocol test cases and benefit from the easy-to-use GUI. Having passed the IOT with the Rohde&Schwarz protocol tester Signalion's Layer 3 protocol option for the SORBAS LTE Test-UE is a well proven reference.

Matthias Stege, Head of Marketing, said: "The worldwide LTE development becomes more and more mature. And so we see an increasing customer demand for higher layer testing. Signalion responds to this request by enhancing its test capabilities to protocol tests. With this protocol test suite Signalion provides the first time complete UE functionality. This allows not only for detailed testing of protocol procedures, but also enhances the usability of Sorbas LTE test solutions for field trials."

The first Layer 3 demonstration can be seen at LTE World Summit where Signalion exhibits at stand number 19 in the Hotel Palace, Berlin, from May 18th to 20th.

About the Summit: The LTE World Summit is the only LTE events series exclusively in partnership with the 3GPP and takes place in middle of the vibrant metropolis of Berlin. This global event is specifically dedicated to LTE and features major players of the business.

About Signalion:

Signalion is an established provider of air-interface diagnostics solutions for 3GPP-LTE. Having introduced the first LTE test-UE to the market, Signalion is a pioneer in providing new features and solutions in the context of LTE infrastructure testing.

The company combines the unique experience of many years of wireless research, algorithm implementation, and leading edge wireless system development.
